

How to use resources to support Mathematical understanding

This Blank Hungarian Five Frame, allows children to visualise numbers as sets of objects and is a simple way to begin teaching and explaining basic number facts. The resource can be used in a number of ways, including activities involving the addition and subtraction of numbers. It will help to support children learning the skill of subitising, beginning to 'see' how many there are without counting.

These 10 Frames are extremely versatile. Use with counters to help children practise subitizing, getting used to recognising small quantities of objects without counting them, for adding and subtracting.
